

What is it?

After almost 13 years we finally have an update of the Time Travel Mod made by MrFusion92 (his old name was BTTF92it). This mod will add all the BTTF's Deloreans and the Dr. Brown Enterprise truck, with several features from the film and an in-game menu to customize the mod and spawn/delete the BTTF IV vehicles. It also includes K.I.T.T. - Knight Rider 2000.

Authors:

- Mr.Fusion92 (main coder);
- Lorenzo3024it (coder and modeler);
- Sersorroza (Deloreans's and KITT's modeler);

Current version: 2.0a (like an open beta test)

Compatibility:

Tested only on GTA IV 1.0.7.0, not tested in 1.0.8.0 and CE

How to install:

Check the file ReadMeInstall.txt

Default keys (you can change them from the menu):

F8: open main menu;

Numpad+ : Time Circuits On/OFF

Numpad- : Fuel Reload (on the delorean's back side)

Numpad* : Instant/Cutscene Time Travel Switch

K: Hover Mode Switch (only on BTTF2 Delorean)

R: RC Mode

X: RC Camera

Q: Open/close Doc's Truck's Ramp

G: Open truck's conversion menu

Y: Truck lights On/OFF

After each time travel with the BTTF 1 Delorean the engine will randomly stop after a while. To turn it on, hold **Action** key (default game key).

Knight Rider keys (you can change them editing the file tt_settings.dat):

Left Shift: Turbo Boost

Numpad+ : Hydraulic

Numpad* : Flip

F1: AutoCruise

F4: Scanner

F5: SuperPursuitMode

F6: Select Weapon

Right Shift: Use Weapon

Experimental functions:

There is an option, disabled by default, which make the interior Deloreans' props work. It includes Time Circuits, Flux Capacitor and the digital speedo. It's still glitchy and laggy, for example it doesn't work on Hover Delorean and after one or two deloreans spawned it will be impossible to spawn other vehicles. It also requires a while to load all the props.

If you want to try it, I suggest first of all to save the Doc's Truck and a Delorean, then edit the file "tt_settings.dat" (in common\data folder): you can choose all props or only many of them (less props = less problems). After game restart, the props will be automatically spawned on the Delorean saved. Wait inside the safe house until it will appear "Loaded all props" (left-up corner of screen).

You can also spawn many other Delorean using the ScriptHook console using the command "spawn" followed by the model's name (delnor, delone, deltwo, delthr or delrro). In this case the Deloreans will be spawned correctly, but with random colors; it also may cause lag and game crash, so use it carefully.

Planned features:

- Customizable Delorean;
- DeloKITT;
- Niko Bellic's BTTF style clothes;
- Emmet Brown character with interactions and quests;
- Hill Valley Courthouse square;
- BTTF Weapons (Doc's gun, Biff's bat, RC controller and much more);
- BTTF 1 Libyans chase and Clocktower scene;
- BTTF 3 train scene;
- More KITT weapons and features.

Known Bugs:

- Sometimes the conversion inside the Doc's Truck doesn't work. If it happens, you may reload the script.
- If you reload the script while inside a vehicle, it could crash again. So please reload the scripts only on foot.
- The KITT keys can't be redefined using the menu, I'll try to fix in next update. You can change them editing the tt_settings.dat (in common\data folder).
- After saving deloreans or deleting saved vehicles the script might crash. Try to reload; if it happens again, try to remove the tt_savedcars.dat file (in common\data folder).
- The RC time travel doesn't work properly, I will work on it for the future updates.
- For unknown reasons, if you install IVTweaker by Zolika1351's, the player hand, inside the deloreans, won't be correctly aligned to the steering wheel. Furthermore it will spin faster and more then expected.

This is a big relase after a lot of time: I worked alone for years and no one, except me, have tested anything, so you could find several bugs. Please contact me if you found glitches or game/script crashes. If you know how to install it using a mod loader please contact me. Any kind of help will be appreciated.
